

Who We Are

Bluestreak Equipment Inc, founded in 2005, is a privately owned company located in Norfolk County in Southern Ontario, Canada.

Our Products

Bluestreak develops, manufactures, markets and sells high-quality well-designed premium products (magnetic, mechanical and sensor-based sorting and cleaning solutions) with smart features and a sustainable design that make it easy for businesses and governments across the globe to reduce, reuse, recycle, and make the world a cleaner, safer, more sustainable place to live.

Our products clean roads, airports and other industrial and commercial environments extending the service life of other equipment, increasing safety and reducing the need for replacement products. Our products sort, facilitating reuse and recycling of materials.

Our products are linked to a range of activities, such as sweeping for foreign object debris at airports to prevent damage to aircraft and other equipment and to increase flight safety, sweeping for hazardous debris such as nails at landfills and waste transfer stations to prevent damage to garbage trucks and other vehicles, and sorting materials in metal and waste recycling activities.

Our Value Proposition

Bluestreak provides durable long-lasting high-quality products with smart features that make it easy for people to solve their cleaning and sorting problems. We make products that work, not just half work. And we stock all products and parts to ensure quick delivery.

The Advantages of Using Our Products

More and more people are aware of the importance of reducing consumption of materials in the first place and reusing materials where possible and recycling where reuse is not possible. All our products contribute in a least one of these ways. This not only is good for the planet, but increases safety, reduces costs, downtime, schedule disruptions and offers a financial return.

Our Competitive Advantage

We create long term value through consumer driven innovation.
