N4B2W6

1. Check magnetic housing

Make sure magnet housing (Square Aluminum Tube) is clean before installation. Remove one of the Plastic Stoppers from one end of the sleeve and slide sleeve onto aluminum housing.

2. Re-install Plastic Stopper

Re-install previously removed Plastic Stopper.

3. Use sweeper to pick up metal debris

Use sweeper to pick up metal debris.

4. Remove debris from the Sleeve

Remove 1 End Stopper from one end. Pull the Quick Clean off Sleeve off lengthwise from the opposite end by using the Endcap as a handle. Pulling the sleeve completely off the aluminum housing will separate the metal debris from the magnet and allow it to discharge onto the ground. A piece of cardboard can be placed under the end of the magnet to collect the debris as it falls to the ground. Re-Install sleeve and continue to pick-up metal debris and repeat clean off as necessary. Note: The Quick Clean Off Sleeve is easier to remove with less metal debris on it, so you can judge according how often you would like to clean it off. More frequent cleanings make the job easier.
